

## Cathode Active Material (CAM) Saggars Morganite LiB

Morganite saggars are manufactured using distinct proprietary material compositions, specially designed for resisting the stringent existing conditions during the calcination process of the cathode active material (CAM).

Our saggars are therefore poised to play an instrumental role as your operational excellence optimization partner for the daily run of your roller hearth kilns.

### OPERATIONAL EXCELLENCE BENEFITS

100% recyclable

2x Longer lifetime

30% more energy efficient

Excellent thermal shock resistance

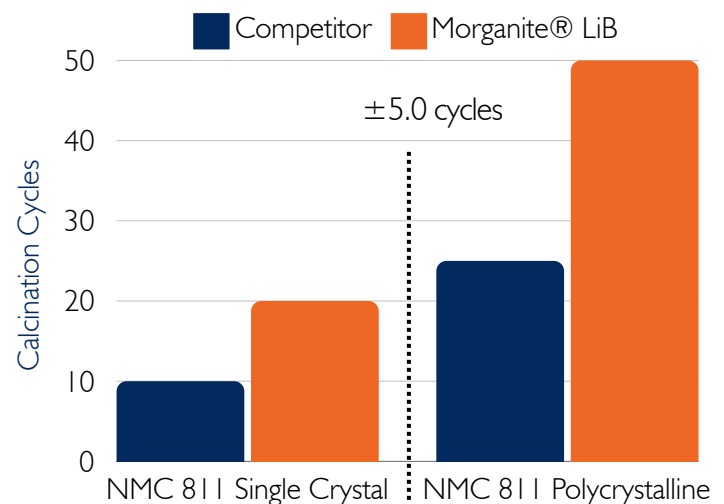

High resistance to corrosion

Local resilient supply chain #

Better inventory management

# We have established a pilot line to manufacture thousands of saggars in India.
